DETAILED ACTION

(1)

Allowable Subject Matter

Claims 1-21 and 35 have been found to be allowable over the prior art of record.

(2)

The following is an examiner's statement of reasons for allowance:

Connection member suitable for the serial connection of carrier tapes and film strips, such as taught by U.S. Patent Nos. 6,428,888 to Kato; 5,643,401 to Schulze-Kahlayss et al.; 4,247,582 to Hanke; 4,146,661 to Grandel et al.; 4,041,201 to Wurker; 3,733,240 to Hanke; 3,475,263 to Kapilow et al.; and 2,969,106 to Reibel et al., are known in the art. Schulze-Kahlayss et al., for example, disclose one connecting member comprising: A base film; a reference band (having a series of knobs) substantially fixed on the base film; a bonding tape adhering on the base film 10; and wherein a straight reference line is provided adjacent the reference band close to the bonding tape. None of the prior art of record, however, specifically teach or suggest the connection member set forth in applicant claims 1 and 11 wherein a straight reference face is provided by the reference band which confronts the bonding tape.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

(3)

Response to Amendments and Arguments

The amendments and arguments filed April 1, 2004 are acknowledged. In response to the amendments to applicant claims 1 and 11 and the cancellation of non-elected claims 22-34, claims 1-21 and 35 have been passed to issue as set forth and explained in sections (1) and (2), above. This action is specifically in response to the amendments to applicant claims 1 and 11 and the arguments set forth on pages 7 and 8 of the applicant's Remarks section wherein it is persuasively argues that the prior art of record does not teach or suggest a raised portion as a reference face on the reference band in the invention of Schulze-Kahlayss et al. that would form an edge or face, these terms normally requiring depth as opposed to a straight line.
